#### **PREFACE**

# 2022 CENSUS OF POPULATION AND HOUSING PRELIMINARY RESULTS

This is a preliminary report, thus the data presented in this report are provisional and subject to change. The figures were compiled from the hybrid method used for the data collection from the field, during the period, of April 4<sup>th</sup> to October 31<sup>st</sup>, 2022, and are therefore not final. The final figures are not expected to vary significantly from these early estimates.

The three (3) methods of data collection used were **CAWI** (**Computer Assisted Web Interviews**) – online self-administered interviews; **CATI** (**Computer Assisted Telephone Interviews**) and **CAPI** (**Computer Assisted Personal Interviews**) - the traditional "face-to-face" interviews using handheld tablets.

The tables presented in this report show data for the Total Population and are classified by Island, Supervisory Districts, and Sex.

Nerissa Gibson Acting Managing Director Bahamas National Statistical Institute

#### **ACKNOWLEDGMENTS**

The Social Statistics Division of the Bahamas National Statistical Institute would like to acknowledge all those persons that assisted with the preparation and production of this report, namely:- Nerissa Gibson, Acting Managing Director, Bahamas National Statistical Institute, Cypreanna Winters, Assistant Director, Labour Force, and Sampling, Leona Wilson, Census IT Consultant, Kim Saunders, Assistant Director, Chief Census Officer, Kimberly Rolle, Assistant Director, Assistant Chief Census Officer, Christa Conyers, and Lauryn Storr, Vital Statistics Section, Tia Rolle, Assistant GIS Officer and Latoya Major, Household Expenditure Survey (HES) and SDG'S Unit.

Prepared and Analyzed by:
Coralee Mackey, Deputy Director
Demographic and Social Statistics
Bahamas National Statistical Institute

#### 2022 CENSUS CONCEPTS AND DEFINITIONS

#### **CONCEPTS AND DEFINITIONS**

#### 1. Census Day

#### Census Day was Monday, April 4, 2022.

This was the reference day, and therefore all questions on the questionnaire (excluding the Total Household Income, Technology and Communication, Economic Activity, and Fertility) referred to the circumstances of the residents on this particular day.

#### 2. Total Population includes:-

- (i) Persons in their usual place of residence on Census Day.
- (ii) Persons who were temporarily absent from their usual place of residence on Census Day.
- (iii) Persons away at school or university.
- (iv) Persons in hospitals or other institutions.
- (v) Persons with no fixed place of abode.
- (vi) Bahamians serving in the diplomatic corps who are resident abroad.

#### 3. Household

The person or persons occupying the dwelling unit.

A family or a person living alone, in a dwelling unit, is considered a household.

#### 4. Supervisory District

A geographical area (synonymous with political boundaries) for which data was collected.

#### 5. Enumeration District

The smallest geographical area for which data is collected.

# PRELIMINARY CENSUS COUNT DATA HIGHLIGHTS

The Bahamas National Statistical Institute is pleased to release the 2022 Census of Population and Housing preliminary results. The 2022 Census Preliminary results show the Total Population of The Bahamas to be 399,314, with a sex distribution of 192,544 males and 206,770 females. Included in this count were all persons who on April 4<sup>th</sup>, were residents of The Bahamas, regardless of their legal status. Therefore, all immigrants, legal and irregular, were counted. Persons serving in the diplomat corps and individuals studying abroad were also included in the count.

#### POPULATION DYNAMICS

#### **Population Growth and Change**

During the intercensal period 2010-2022, the population of The Bahamas increased by 13.6% (47,853 persons), resulting in an average annual growth rate of 1.1%. This increase (13.6%) is 2.2 percentage points lower than the increase (15.8%) between 2000 and 2010. There was also a decline in the average annual growth rate, down from 1.6% in 2010 to 1.1% in 2022 as seen in **Table (i)** below:-

#### **POPULATION TRENDS FOR CENSUS YEARS 1901-2022**

Table (i)

			Intercensal Increase				
Census Year	Census Date	Total Population	Absolute Increase/Decrease	%	Average Annual Increase/Decrease	Average Annual Growth	
1901	April 14th	53,735	6,170	12.97	617.0	1.3	
1911	April 2nd	55,944	2,209	4.11	220.9	0.4	
1921	April 24th	53,031	-2,913	-5.21	-291.3	-0.6	
1931	26th April	59,828	6,797	12.82	679.7	1.2	
1943	April 25th	68,846	9,018	15.07	751.5	1.2	
1953	December 6th	84,841	15,995	23.23	1,599.5	2.0	
1963	November 15th	130,220	45,379	53.49	4,537.9	4.4	
1970	April 7th	168,812	38,592	29.64	5,513.1	3.8	
1980	May 12th	209,505	40,693	24.11	4,069.3	2.2	
1990	May 1st	255,049	45,544	21.74	4,554.4	2.0	
2000	May 1st	303,611	48,562	19.04	4,856.2	1.8	
2010	May 3rd	351,461	47,850	15.8	4,785.0	1.6	
2022	April 4th	399,314	47,853	13.6	3,987.8	1.1	

<u>Note:</u> The **Average Annual Growth** for the year 2022 is provisional, and is based on the "**Preliminary 2022 Census Population Count**", which is not final, therefore, the data should be used with caution.

#### **Components of Population Change**

The main components of population change are births, deaths, and migration. "Natural Increase" is defined as the difference between live-births and deaths, and "Net Migration" is defined as the difference between the number of people moving into an area and the number of people moving out. Because it is difficult to measure actual migration, demographers often estimate migration as a residual value, by calculating the difference between total population and natural increase.

Analyzing the components of change is an enlightening way to understand how the population is shifting over time and the main contributors to the change. Looking at the components (**natural increase and net migration**) from 1990 to 2000, the population grew mainly by natural increase, from 2000 to 2010 net migration started to become a contender in population growth for The Bahamas, and by 2022 net migration has become a part of the landscape. As visually seen in **Chart 1**.

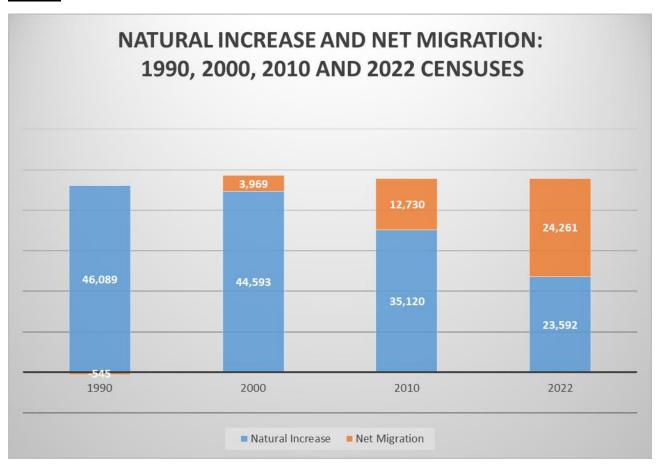

Contributing factors to changes in the components are a lower number of babies being born, an increase in the number of deaths, and an increase in the number of persons (citizens and non-citizens) migrating into the country (see Table (ii) below).

#### **COMPONENTS OF POPULATION CHANGE: 1953-2022**

Table (ii)

				Natural	Net
Census Years	Population	Births	Deaths	Increase	Migration
1953	84,841	25,090	10,750	14,340	1,650
1963	130,220	32,470	8,960	23,510	21,870
1970	168,812	28,010	6,850	21,160	17,430
1980	209,505	48,057	11,244	36,813	3,880
1990	<b>1990</b> 255,049		12,837	46,089	-545
2000	303,611	60,451	15,858	44,593	3,969
2010	<b>2010</b> 351,461		18,232	35,120	12,730
2022	399,314	53,062	29,470	23,592	24,261

<u>Note:</u> The Components of Population Change for the year 2022 are provisional, and are based on the "Preliminary 2022 Census Population Count", which is not final, therefore, the data should be used with caution.

<u>Note:</u> The Natural Increase and Net Migration for the year 2022 is provisional and are based on the "Preliminary 2022 Census Population Count", which is not final, therefore, the data should be used with caution.

#### **Geographical Distribution of the Population**

The data show that New Providence with 296,522 persons accounted for 74.26% of the population. This, compared to 2010, represents a 4.17 percentage point increase in this island's population share. Grand Bahama, however, registered a decrease in its population share; Grand Bahama's count of 47,475 persons, accounted for 11.89% of the population, a decline of 2.73 percentage points, from 14.62% in 2010. Abaco, Eleuthera, Andros and Exuma accounted for 4.15%, 2.32%, 1.95% and 1.83% respectively of the total population (see Table 4).

New Providence showed substantial population gain during the intercensal period. The population of New Providence increased by 50,193 or 20.38%, whilst Grand Bahama showed a decrease in population. Grand Bahama decreased by almost four thousand persons (3,893) or -7.58%, this decrease in absolute population, was the highest among all of the islands, showing population decreases during the intercensal period. In addition to New Providence, only nine of the islands registered population gains. These were Acklins,

Andros, Berry Islands, Bimini, Cat Island, Eleuthera, Exuma and Cays, Harbour Island, and Spanish Wells. All of the remaining islands suffered population loss. Collectively, the Family Islands showed a change in population from 53,764 in 2010 to 55,317 in 2022, an increase of 2.89% (see Table 2 and Charts 2 and 3).

#### **Sex Distribution**

The sex ratio is an important indicator of population composition. The sex ratio is used to describe the balance between males and females in the population. The preliminary count revealed that there were 192,544 males and 206,770 females for a sex ratio of 93 males per 100 females. Males accounted for 48.22% of the population and females 52.78%.

#### Households

There were 118,221 households recorded, an increase of 15,359 or 14.93% over 2010. The average household size decreased from 3.42 in 2010 to 3.38 in 2022. New Providence accounted for 79,660 of these households, with an average household size of 3.72, which was higher than the national average. In Grand Bahama, there were 17,820 households and the average household size was 2.66 persons. Mayaguana with 113 households had the lowest average household size of 1.84 persons, while Harbour Island with 436 households had the highest with 4.27 persons (see Table 5).

#### **Population Density**

The population density is measured by the number of people per square mile or kilometer. Population density is also a way of showing how crowded a place is in comparison to its land area. The overall population density of The Bahamas increased from 65.3 persons per square mile in 2010 to 74.2 persons in 2022. Notable increases were shown for New Providence, Bimini and the Berry Islands. New Providence continued to be the most densely populated of the three; recording a population density of 3,707 persons per square mile, an increase of 20.4% or 627 more persons per square mile. Bimini and the Berry Islands recorded a 2% and 2.1% increase over the period, resulting in an additional 39 and 17 persons per square mile respectively (see Table 7 and Chart 4).

#### **Reliability of the Census Data**

In keeping with standard practices, the census count was evaluated against other independent sources of data in order to determine its accuracy. One of the major "benchmarks" is the population projections that were made following the 2010 Census. These Projections had population estimates for the year 2022 at

404,290 using the high variant; 397,360 using the medium variant and 390,140 using the low variant. The preliminary census count of 399,314 is within the range of these projections, falling between the medium and high variants.

Another independent source used was the vital registration records of the country. Under this procedure, the number of birth, deaths, in-migrants, and out-migrants are added to or subtracted from the population enumerated in the previous census to calculate the expected population size and composition. Although accurate records of international migration are not available, the records show that 53,062 live births and 29,470 deaths occurred in The Bahamas during the intercensal period. This puts the natural increase at 23,592. When added to the 2010 Census figure, a population of 375,053 is the result. The difference of 24,261 between this population and the preliminary census count can be attributed to net migration.

Another procedure for evaluating the accuracy of the census count was the Post Enumeration Survey (PES). Bearing in mind that no census is perfect, a major assessment of the completeness of census enumeration was carried out shortly after the closing out of field enumeration. A number of households in selected enumeration districts (EDs) were canvassed in order to determine whether or not persons and housing units were accurately counted in the census exercise. The initial findings of the survey mirrored the census results as it relates to household size, coverage, and response rates.

As stated earlier, these results are preliminary and subject to change. More detailed information will be made available in the final results. Additional information will be released by the Census Office as it becomes available.

All inquiries should be directed to the Chief Census Officer, Census Office, P.O. Box N-3904, Nassau Bahamas. Telephone 242-604-4000.
